

VF series

1,600kg / 1,800kg / 2,000kg

Electric forklift trucks

- YaleStop automatic park brake eliminates uncontrolled roll-back on ramps
- Oil-immersed brakes
- CAN bus and high-performance AC motor technology
- E-steering to increase productivity while maintaining excellent battery life
- New 180° fold back door and fork pockets allow completing horizontal battery exchange in 3 min
- 2 battery choices: DIN and BS.

VDI 2198 - General Specifications

■ Max. battery.

▼ Bottom of forks.

+ Without load backrest.

○ h₆ subject to +/- 5mm tolerance.

✕ Full suspension seat at midpoint of suspension travel. Standard hood specified. 1051mm with raised hood.

▶ Add 32mm with load backrest.

✔ HiP performance setting.

◇ Maximum flow set through dash display.

* HiP performance.

● Min./max.

□ With manual hydraulic controls; 155 bar with e-hydraulic controls.

^(A) Overall width 1116mm with required 200/50-10 tyres fitted for masts 5000mm and over.

^(B) With vertical battery removal; add 34mm with horizontal removal.

(C) 90mm with horizontal battery removal.
★ LPAZ, measured according to the test cycles and based on the weighting values contained in EN12053.

Spec sheet truck based on:
3360mm (Clear View) and 3430mm (Hi-Vis) to top of fork, 2 stage LFL mast with standard carriage and 1000mm forks, with HiP performance setting, DIN battery configuration.

All values are nominal values and they are subject to tolerances. For further information, please contact the manufacturer.
Yale products might be subject to change without notice.

Lift trucks illustrated may feature optional equipment.
Values may vary with alternative configurations.

Truck Dimensions

$$Ast = Wa + R + a = Wa + \sqrt{((l_6 + x)^2 + (b_{12}/2 - b_{13})^2)} + a$$

Note that the capacities are given in kilograms.
All ratings with DIN Battery.
All ratings with 1000mm forks and less load backrest.

* Tilt speed reduced to 1° per second by mechanical tilt speed restrictors for mast heights 5000mm and above.

All values are nominal values and they are subject to tolerances. For further information, please contact the manufacturer.
Yale products might be subject to change

without notice.
Lift trucks illustrated may feature optional equipment.
Values may vary with alternative configurations.

AC Technology

Yale AC technology Class H traction motors are suitable for the most arduous applications. Smooth forward and reverse directional changes providing seamless driving action. In the high-performance or 'HiP' setting, AC technology provides increased speed and acceleration, even when fully laden, and increased speed on grade. As well as improving performance, AC technology reduces maintenance and allows service intervals of 1000 hours for most components.

Brakes

Yale has replaced the previous hydraulic service brake system with 'E-braking', which uses the regenerative braking principle. The brake pedal position is monitored by a sensor whose voltage output determines the amount of braking torque provided by the motors. Yale's E-braking system is self-calibrating and requires no maintenance.

The truck is equipped with an automatic YaleStop park brake: spring applied, electro magnetically released park brakes are mounted at the end of both motors. The park brake is automatically set by the control system, so that the brake is always set whenever the truck is not moving, and no traction has been requested. Moreover the park brake provides controllability on ramp applications.

Steering

E-steering eliminates the hydraulic steering lines from the steer column which is infinitely adjustable in a range of 26°. The E-steering also incorporates the synchronous steering function so the steer knob always returns to the home position which can be selected via the dash display. During cornering the speed of the drive motors is continuously adjusted independently by the traction controller ensuring smooth operation. The Yale VF features a state-of-the-art new customised steer-axle that has increased articulation of the steer wheels, allowing it to turn in smaller spaces than a conventional 4-wheel steer-axle.

Performance modes

Performance of the truck can be tailored via the enhanced overhead display, with 4 performance modes available to suit the requirements of the application or the preferences of the driver. For maximum speed and acceleration, choose mode 4, or for more delicate manoeuvring and extended battery life, mode 1 is ideal.

Your service technician can alter the top speed and acceleration of mode 4, with modes 1, 2 and 3 being automatically adjusted as percentages of setting 4.

'eLo' and 'HiP' Settings

Yale VF trucks feature an 'eLo' energy saving setting (accessible via the dash display with service password), which provides exceptional energy efficient performance for when you require continuous operation over longer periods without recharging the battery. You can choose the 'HiP' high performance setting for higher top speeds and acceleration for the most demanding applications.

Improved ergonomics

The VF is designed for optimum operator comfort. The operator is seated in an ergonomically designed position for maximum safety, comfort, visibility and ease of operation. The truck features a very low step height, generous floor and storage space, standard grab handle for ease of entry and standard reverse grab handle. The full suspension seat has 80mm of adjustment. A swivel seat option for a superior reverse driving position is available. Both the mini-lever module and the manual levers have an integrated direction switch. Clear footwell allows easy access from both sides.

Masts

A full range of Yale Hi-Vis 2 stage LFL and 2 and 3 stage FFL masts are available. Yale Hi-Vis masts are designed for maximum visibility, with widely spaced channels, lift chains and main lift cylinders. The Yale Clear View Mast with class-leading visibility is offered on the 1.6 Ton capacity.

Battery

Choice of 2 battery sizes:

DIN and BS.

Choice of 2 wheelbases:

Depending on the capacity, there is a choice of Medium Wheelbase (MWB), and Long Wheelbase (LWB). The LWB versions provide extra battery space and longer shift life. MWB versions offer improved maneuverability and reduced stacking aisle dimensions. Battery discharge indicator and lift interrupt are standard on all trucks.

Battery Exchange

There are several different methods available to exchange the battery (should this be necessary), using either a crane, a 2nd fork lift truck or the Yale purpose designed pallet truck.

Battery exchange can be accomplished in under 3 minutes keeping truck downtime to a minimum.

Low lifetime costs

Lower maintenance costs as a result of less maintenance by E- brakes, electric park brake, E-steering, CAN bus and AC technology. Transmission is sealed for life, eliminating the need for service. LED light packages are offered as an option.

1000 hours service interval for most components.

Auto Regen Braking optimises the shift life of the battery and contributes to an increase in the life of parts.

Options

- AccuTouch mini-levers
- Foot directional control
- Lighting kits, including LED lights
- Reverse alarm
- Integrated sideshift
- DIN and BS battery
- Side battery extraction.

VF series
