

VX series Diesel and LP Gas Forklift Trucks

8,000kg / 9,000kg

- Intellix Vehicle Management System
- CANbus technology
- Techtronix 332 Series transmission
- Oil Immersed Brakes
- Yale AccuTouch™ Mini Lever Module
- On-board Diagnostics

Truck Configuration 2-stage LFL F80 mast at HNHL (5565mm MFH) 80VX6 models. 2-stage LFL F80 mast at HNHL (5315mm MFH) 90VX6 models. 2-stage LFL F90 mast at HNHL (5065mm MFH) 80VX9 models. 2030mm STANDARD HOOK CARRIAGE WITH LOAD BACKREST Basic Truck: DSL with 3-speed basic transmission and Overhead Guard solid Pneumatic tyres.

The ratings are computed using fork lengths as below:

	Load Centre (mm)	Fork length (mm)		
	500 to 700	1200		
All	Over 700 to 1000	1500		
All models	Over 1000 to 1200	1800		
	Over 1220	2400		

Note:

Special forks with higher load ratings are required to obtain full truck ratings on load centers greater than 1000mm on GDP/GLP 80VX9 and greater than 1300mm on GDP/ GLP 90VX6.

4500mm Bottom of Forks / 4665mm Top of Forks F90 2 stage LFL mast with 2030mm standard carriage, 1800mm forks.

4500mm Bottom of Forks / 4565mm Top of Forks F80 2 stage LFL mast with 2030mm standard carriage, 1200mm forks.

Other tyre options are available
Backtilt limited to 60 with some mast options
Carriage is 2030mm wide, load backrest is 2080mm wide.

VX series

Yale Veracitor VX Series

This series of trucks is designed to provide excellent performance and is optimized for lowest hourly cost of operation. An active regenerating Diesel particulate filter significantly reduces the number of services interventions. DPF performance is constantly monitored and displayed on supplemental display at operator eye level.

Diesel Engines

The Yale Veracitor Cummins QSB3.3L diesel turbo charged engine featuring legendary Cummins reliability is offered for the Veracitor Base model and is available for unregulated markets. The Yale Veracitot Value and Productivity models feature new Stage IIIB compatible Kubota V3800 E4 3.8L diesel engine or GM 5.7L V8 LPG engine for regulated markets.

Low emission engines form Kubota

The Stage IIIB Kubota V3800 E4 3.8L (82 kW @ 2200rpm) diesel engine meets the stringent emissions regulations by using a number of technologies including cooled exhaust gas recirculation, charge air cooling and an active regenerating Diesel particulate filter (DPF) which reduces soot levels by 90% to 0.025g/kWh.

Stage IIIB = High productivity and low emissions. You can recognize a low emission trucks by the Stage IIIB symbol.

NOTE: A Stage IIIB engine must run on Ultra Low SulphurDiesel (ULSD) fuel, with a maximum of 15 ppm sulphur content. Diesel fuel with a higher sulphur content than 15ppm will compromise the emissions performance of the Stage IIIB engine and may result in damage to components.

LPG Engines

The Yale Veracitor VX GM Vortec[™] V8 engine features a rigid cast iron block and main bearing caps. The Nodular iron crankshaft is supported on four main bearings with a cast iron camshaft. Hydraulic valve lifters are utilized to eliminate the need for manual adjustment. The GM engines also feature an electronic throttle for precise performance and control.

Fuel System

The GM LPG engine uses a mixer system. The system uses a vaporizer built into the electronic pressure

Engine Specifications

LPG Engine Engine Cylinders Displacement Power Torque	GM V8 5.7 litre 98 kW @ 2,400rpm 422 Nm @ 1,500rpm
Stage IIIA Dies Engine Cylinders Displacement	el Engine Cummins Inline 4 3.3 litre
Power Torque	82 kW @ 2,400rpm 415 Nm @ 1,400rpm
Stage IIIB Dies Engine Cylinders Displacement Power Torque	Kubota Inline 4 3.8 litre 82 kW @ 2,400rpm 371 Nm @ 1,400rpm

regulator to convert the fuel from a liquid to a gas and then precisely deliver the proper amount to the mixer via the electronic pressure regulator. An electronic throttle body regulates the fuel/air mixture to the intake manifold. The Engine Control Unit controls the electronic throttle body, electronic pressure regulator and spark advance to provide the necessary torque. The Engine Control Unit's inputs include manifold absolute pressure, intake air temperature, engine coolant temperature, engine oil pressure, accelerator pedal position, throttle position, engine speed, camshaft position, plus pre and post catalyst oxygen sensor signals.

Transmissions Techtronix 332 transmission

The standard Techtronix 332 transmission features three speeds

forward and two speeds in reverse for excellent gradeability and drawbar pull while allowing top travel speeds for maximum productivity. First gear also offers increased drawbar pull for use on gradients. Whilst second and third gears provide maximum engine efficiency in applications where longer travel distances are common.

Auto Deceleration (ADS)

This is achieved through the controlled application of the clutch packs to slow the truck down without the need to apply the foot brake.

Controlled Power Reversal (CPR)

Tyre spin is significantly reduced by precisely regulating engine speed during full power reversal situations. Tyre wear is proportionally decreased, reducing the number of replacement tyres required.

Controlled Roll Back (CRB)

Roll back on gradients is limited to 75mm per second making load spotting and discharging of loads on ramps and gradients easier and more efficient.

Techronix 332+ Transmission

The Techtronix 332+ has all the standard Techtronix 332 transmission features plus Dynamic Auto Deceleration System (DADS) and Auto Speed Hydraulics (ASH) with Automatic Inching Control which automatically increases engine RPM as hydraulic functions are actuated, while maintaining control over vehicle speed. The Throttle Response Management feature (TRM) provides travel speed as a direct result of pedal position, improving truck control.

A 100 mesh suction and 10 micron return line filtration system protect the transmission from abrasive contaminants.

Auto-Speed Hydraulics (ASH) with Automatic Inching Control

When lifting a load, the engine speed is automatically increased to provide full hydraulic power. The Intelix VSM[™] maintains the travel speed (or prevents travel) until the operator activates the accelerator. No operator inching is required and productivity is increased by simplifying operator actions.

Throttle Response Management (TRM)

This feature allows the operator to manage his travel speed, according to the position of his foot on the accelerator pedal. For example, travel speed can be maintained both on the level and on a gradient, without the need to depress the pedal further. The system also compensates for hydraulic operation and drawbar pull.

Dynamic Auto Deceleration System (DADS)

This allows the operator to reduce the speed of the truck without using the brake. The rate of braking is

determined by the programmable dashboard settings 1-10. The rate of deceleration can be controlled further by the rate at which the operator releases his foot from the accelerator pedal.

The transmission also features electronic shift control, smooth electronic inching, neutral start switch, and anti-restart protection. A single pedal controls both inching and braking.

Optional dual inch/brake pedals are available for operators who prefer this design.

Cooling System

The modular radiator system incorporates sections for engine coolant, transmission oil and engine intake air. A 500mm diameter blade pusher-type fan provides cooling airflow. A permanently lubricated water pump and a high capacity, cross-flow radiator ensure rapid heat dissipation. The sealed cooling system operates at a pressure of 1.0 bar and includes a coolant recovery tank for visual inspection of coolant level. The radiator is soft-mounted for durability.

Drive Axle

The drive axles are designed to withstand heavy loads and absorb shocks. The wheel hubs rotate on large tapered roller bearings. The drive shaft transmits rotational torque to the drive axle from the engine and transmission. Transmission torque is distributed through planetary gear reduction and an industrial hypoid ring gear and pinion differential assembly.

The drive axle is a "self contained" assembly that is isolated from the transmission by the drive shaft and heavy-duty rubber isolators. The axle shafts utilise a "rolled fillet" root spline design for increased resistance to torsion stress. A magnetic sump plug is used to collect any metal particles that are circulating in the axle oil, preventing component wear.

Brakes

Oil immersed disc brakes are standard and internal to the axle for environmental protection. The low pedal effort brakes require no adjustment and very little maintenance, yet provide an extremely long service life. Metered hydraulic oil pressure is used to actuate the oil immersed disc brakes via a brake-pedal actuated modulating valve. This system yields consistent pedal travel for optimum control. The independent, hand adjustable parking brake with push-button release has an audible alarm to indicate when the operator has left the truck without applying the park brake.

Steering

Hydraulic Power Steering (hydrostatic steering) provides responsive control and eliminates mechanical linkages for reduced surface shock and simplified maintenance. The steering wheel is 30cm in diameter with a textured surface grip and spinner knob, and requires only four turns lock-to-lock. The center mounted steer cylinder is located within the confines of the steer axle for protection.

Steer Axle

The steer axle is constructed of cast ductile steel and is mounted on phenolic bushings, allowing excellent stability and axle articulation. The steer axle system features tapered spindle bearings and non-adjustable tie rod end for durability.

Chassis

The chassis designed by state-of-theart finite element methods features 25mm thick frame members and contains a rugged, unitised frame structure with a low step for simple entrance to the operator's compartment. The ergonomically designed overhead guard is bar type for excellent visibility and reduced noise. Gull wing doors on both right and left sides provide excellent access.

Operator's Compartment

The operator's compartment features Yale AccuTouch[™] minilever electrohydraulic controls integrated into the operator's right-side armrest providing superior ergonomics. The automotivestyle pedal arrangement has a large, single inch/brake pedal as standard. Rubber floor mats reduce noise and vibration. The floorplate can be removed without tools for excellent service access. Low step height and convenient hand grips provide easy entry and exit to and from the truck and superior reverse driving position.

Intellix Vehicle System Manager

This is the master truck controller, providing extensive monitoring and control of truck functions and systems. CANbus technology reduces wiring complexity and enables comprehensive communications between truck systems. The ergonomically positioned dash display transmits continual feedback to the operator and allows for communication of service codes. Comprehensive on-board diagnostics enable quick and easy troubleshooting. The electrical system features sealed connectors and 'Hall Effect' sensors for superior dependability.

Hydraulic System

The hydraulic system incorporates a gear type pump with a cast iron body for quiet efficiency. The system is protected from overloads by a main relief valve for the lift circuit and a secondary relief valve for tilt and auxiliary functions. Oil is double filtered through a 100 mesh suction line strainer and 10 micron return line filter. The hydraulic tank is integrated into the frame. An emergency lowering valve is provided to allow the load to be lowered in the event of power loss. O-ring face seal fittings are used in all high pressure hydraulic connections.

Masts

Yale Simplex LFL (Limited Free Lift) and Triplex FFL (Full Free Lift) masts are available. The mast features pre-lubed and sealed full radius load rollers that resist forward, rearward and lateral forces. Side-thrust wear pads allow for periodic adjustment for lateral clearances. The rolled mast channels are made of high strength steel to provide resistance to flaring of the mast channel. Wide (2.03m) hook-type

7

VX series Models: GDP/GLP 80VX6, 80VX9, 90VX6

carriages are standard equipment, providing great visibility and the fitting of a wide variety of forks and attachments. Pin-type carriages are also available.

Options

- Powertrain protection system with engine shutdown
- Premium monitoring package
- Sideshifting fork positioner
- Accumulator
- Keyless start (with auxillary key switch)
- LED brake and reversing lights
- Headlights and rear drive lights with halogen bulbs
- Headlights and rear drive lights with LED bulbs
- Traction speed limiter
- Return-to-set tilt
- Integral operator's cab
- Swivel full suspension vinyl and cloth seats
- Foot directional control pedal
- Impact monitor
- Operator password
- Alarm reverse actuated 82-102 dB(A) - self adjusting
- LED amber strobe light keyswitch activated
- Solid and radial tyres
- 4 function (2 aux.) hydraulic control valve
